

Indaba Transcription Acceptance Testing

Goal of the testing: study/watch users using the app and examine what aspects of the app work and don't

Instructions

Everyone will get a tablet, and will be tasked with Transcribing a video using the Indaba app.

The steps are as follows:

- Everyone will chunk, and transcribe individually
- Then, everyone will review everyone's responses

Outcomes

- More convenient pausing button for transcribing (just above keyboard)
- Keep pause button on screen at all times
- Back/Forward 5 seconds buttons in transcribing section on video.
- Button to highlight a section you're not sure about (for review later)
- Keep keyboard active when button is pressed
- Make slider bigger
- Bigger chunk button
- Automatically break chunks down into 3/5 second sections for transcribing
- These 3/5 second second chunks should automatically replay/loop themselves and automatically pause when the user starts typing.
- Intro text split out over two (or more) pages for readability
- Intro text only appears once, and then a button to make it reappear.
- Keep video controls on screen at all times (?)
- Use dots just below video to show progress through current chunk
- Highlight scrobber track to show the current chunk you're transcribing

Issues

- Performance of video scrobbling needs to be improved
- Automatic scroll into view not working consistently

- Selecting video to transcribe dynamically is broken
- Seek bar not staying in sync sometimes.
